The performance data quoted herein represents past performance and is not a guarantee of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For the most recent month-end performance, please call 800-245-0371. Performance reflects contractual fee waivers in effect. If fee waivers were not in place, returns would be reduced.

Notable Observations

In Q1 2026, RCTIX (the "Fund") returned -0.11% net of fees vs. a return of -0.05% for the Bloomberg U.S. Aggregate Bond Index (the "BAG" or the "Benchmark") and -0.50% for the Bloomberg U.S. Corporate High Yield Bond Index.

The primary contributors to Fund performance in Q1 2026 were Non-Agency RMBS (+5bps) and ABS (+4bps). Over the same period, RCTIX's Corporate book was the primary detractor (-9bps). In total return terms, the Fund's Non-Agency RMBS book returned +1.4% and the ABS book returned +1.0%. The Fund's the Corporates book was down -1.9%.

As of Q1 2026, the Fund had a portfolio yield-to-maturity ("YTM") of 9.03% vs. 4.57% for the BAG and 7.62% for the Bloomberg U.S. Corporate High Yield Bond Index. The Fund's cash allocation currently sits ~2%, slightly below Q4 2025 levels, in order to lean into opportunities afforded by recent market dislocation.

In Q1 2026, we opportunistically increased the Fund's exposure to yield-to-call ("YTC") Corporates, bonds that we expect to be redeemed at their first possible call date rather than paid down at, or near, maturity. The Fund's duration of 4.1 years modestly exceeded its typical target range of 2.5-3.0 years, driven by its Non-Agency RMBS and Inverse IO Agency MBS exposure. Nonetheless, the Fund remains shorter duration relative to its Benchmark (5.8 years), a deliberate portfolio management decision intended to preserve flexibility and provide increased resilience to potential market volatility in the months ahead.

River Canyon Fund Management LLC (the "Adviser") has contractually agreed to waive fees and reimburse expenses to the extent that Total Annual Fund Operating Expenses (excluding brokerage costs, interest, taxes, dividend expense on short positions, litigation and indemnification expenses, expenses associated with investments in underlying investment companies, and extraordinary expenses) exceed 0.65% until January 28, 2027. The Net Expense Ratio is 0.67% and the Gross Expense Ratio is 0.83%.

Refinitiv Lipper Fund Awards, ©2023 Refinitiv. All rights reserved. Used under license. The Lipper Fund Awards recognized River Canyon Total Return Bond, Institutional for the 5-year performance period out of 83 funds for the 5-year period ending November 30, 2023 under the Multi-Sector Income Funds Classification. The fund did not win the Lipper Award in 2024.

RCTIX Quarterly Investment Report | Q1 2026

Allocation by Credit Quality

Portfolio Characteristics

	RCTIX	BAG
SEC Yield (Sub)*	7.68%	-
SEC Yield (Unsub)*	7.52%	4.16%
Floating Rate	40%	-
Annualized Volatility	4.10%	4.87%
Sharpe Ratio	0.85	-0.05

Credit Quality ratings reflect the credit quality of the underlying securities in the Fund's portfolio and not that of the Fund itself. Quality Ratings are subject to change. Credit Quality weights by rating are derived from the highest bond rating as determined by S&P, Moody's, Fitch, and other nationally recognized statistical rating organization. Ratings are expressed as letters ranging from AAA/Aaa which is the highest grade, to D which is the lowest grade.

Trailing Sector Allocation

Portfolio Allocation (3/31/2026)	
Asset-Based Credit	61%
Corporate Debt	32%
Municipal Debt	3%
US Sovereign Debt	2%
Cash	2%

Important Information

The Fund's benchmarks for performance comparison purposes are the Bloomberg U.S. Aggregate Bond Index. The Bloomberg U.S. Aggregate Bond Index is an unmanaged index that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, mortgage pass-through securities, and asset-backed securities. The index returns reflect the theoretical reinvestment of dividends on securities in the index. The impact of any transaction costs and the deduction associated with a mutual fund, such as investment management and administration fees, are not reflected in the index calculations. It is not possible to invest directly in an index.

PRINCIPAL INVESTMENT RISKS

It is important to note that the Fund is not guaranteed by the U.S. Government. Fixed income investments involve interest rate risk, issuer credit risk and risk of default, and price volatility risk. Funds investing in bonds can lose their value as interest rates rise, and investors participating in such Funds can suffer a partial or total loss of their principal. The Fund invests in asset backed and mortgaged backed securities which may be more volatile than other fixed income securities and influenced by the housing markets or markets from which the collateral is drawn. For a more complete list of fund risks, please see the Prospectus.

*The 30-Day SEC Yield represents net investment income earned by the Fund over the 30-Day period ended 03/31/2026, expressed as an annual percentage rate based on the Fund's share price at the end of the 30-Day period. The 30-Day unsubsidized SEC Yield does not reflect any fee waivers/reimbursements/limits in effect.

RCTIX Quarterly Investment Report | Q1 2026

Q1 2026 Commentary & Outlook

In Q1 2026, RCTIX (the “Fund”) returned -0.11% net of fees vs. a return of -0.05% for the Bloomberg U.S. Aggregate Bond Index (the “BAG” or the “Benchmark”) and -0.50% for the Bloomberg U.S. Corporate High Yield Bond Index.

The primary contributors to Fund performance in Q1 2026 were Non-Agency RMBS (+5bps) and ABS (+4bps). Over the same period, RCTIX’s Corporate book was the primary detractor (-9bps). In total return terms, the Fund’s Non-Agency RMBS book returned +1.4% and the ABS book returned +1.0%. The Fund’s the Corporates book was down -1.9%.

As of Q1 2026, the Fund had a portfolio yield-to-maturity (“YTM”) of 9.03% vs. 4.57% for the BAG and 7.62% for the Bloomberg U.S. Corporate High Yield Bond Index. The Fund’s cash allocation currently sits ~2%, slightly below Q4 2025 levels, in order to lean into opportunities afforded by recent market dislocation.

In Q1 2026, we opportunistically increased the Fund’s exposure to yield-to-call (“YTC”) Corporates, bonds that we expect to be redeemed at their first possible call date rather than paid down at, or near, maturity. The Fund’s duration of 4.1 years modestly exceeded its typical target range of 2.5-3.0 years, driven by its Non-Agency RMBS and Inverse IO Agency MBS exposure. Nonetheless, the Fund remains shorter duration relative to its Benchmark (5.8 years), a deliberate portfolio management decision intended to preserve flexibility and provide increased resilience to potential market volatility in the months ahead.

In the current market environment, we are emphasizing higher-coupon opportunities that generate returns independent of daily price moves, while capitalizing on sector-specific and idiosyncratic dislocations in the corporate credit market, the prolonged strength of the single-family housing market, and Agency Inverse IOs, which offer compelling interest rate hedging:

- **Disruption in Corporate Credit:** A confluence of recent macro disruptions has increased volatility across credit markets, including the conflict in the Middle East, which has led to renewed supply-side driven inflation risk, and heightened market concern about potential AI disintermediation within the software sector. To capitalize on the market dislocation and certain non-economic selling behavior driven by this volatility, we have been actively investing in YTC Corporates offering yields of ~6-7% where a small move in price can correspond to a material move in yields. We believe these types of present attractive relative value and position the Fund to earn mid-to-high single digit all-in yields, with potential upside from pull to par events (or takeout at a premium to par).
- **Strength in the Single-Family Housing Market:** We see compelling opportunities in Non-Agency RMBS due to a structural shortage of single-family homes in the U.S., exacerbated by the "lock-in" effect whereby Covid-era mortgage rates are well below current market rates. This incentivizes homeowners to remain in place, suppressing the supply of homes for sale and supporting housing prices. Accordingly, homeowners are sitting on close to a record amount of home equity value. We believe 1st and 2nd lien home equity Non-Agency RMBS offer attractive yields backed by high quality prime and near-prime homeowner borrower profiles.
- **Optionality for Fed Cuts:** We appreciate the optionality offered by Agency Inverse IOs, which are a form of Agency MBS whose coupons rise as rates fall (driven by faster pre-payments). While markets currently price in no rate cuts for 2026, we believe there is potential for a bumpy deterioration in the labor market that could quickly shift interest rate expectations making this exposure an attractive source of potential upside and convexity.

The Fund's benchmarks for performance comparison purposes are the Bloomberg U.S. Aggregate Bond Index. The Bloomberg U.S. Aggregate Bond Index is an unmanaged index that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, mortgage pass-through securities, and asset-backed securities. The table herein reflects the theoretical reinvestment of dividends on securities in the index. The impact of deduction of expenses associated with a mutual fund, such as investment management and administration fees, are not reflected in the index calculations. It is not possible to invest directly in an index.

Important Information

Sharpe Ratio: A measurement of the portfolio's outperformance per unit of the portfolio's volatility.

Duration: A measurement of the portfolio's bonds' sensitivity to interest rate changes. "Duration" represents Effective Duration for RCTIX and Modified Adjusted Duration for the Index. Data is sourced from Bloomberg PORT.

Yield to Maturity ("YTM"): The rate of return anticipated on a bond if it is held until the maturity date. YTM is considered a long-term bond yield expressed as an annual rate. The calculation of YTM takes into account the current price, par value, coupon interest rate and time to maturity. It is also assumed that all coupons are reinvested at the same rate.

Yield-to-call ("YTC"): The rate of return an investor earns if a callable bond is held until its call date, when the issuer can repurchase it before maturity.

CMBS: Commercial Mortgage-Backed Securities

RMBS: Residential Mortgage-Backed Securities

CLO: Collateralized Loan Obligation

ABS: Asset Backed Securities

AUM: Assets Under Management

S&P: The Standard and Poor's 500, or simply the S&P 500, is a stock market index tracking the stock performance of 500 of the largest companies listed on stock exchanges in the United States

Basis Point: one hundredth of one percent

Agency Inverse IO: a type of derivative mortgage-backed security that receives no principal payments and has a coupon rate with an inverse relationship to a benchmark interest rate

IMPORTANT LIPPER FUND AWARDS DISCLOSURES

The Lipper Fund Awards recognized River Canyon Total Return Bond, Institutional for the 5-year performance period ended 11/30/23 out of 83 funds under the Multi-Sector Income Funds Classification. The Lipper Fund Awards are based on the Lipper Leader for Consistent Return rating, which is a risk-adjusted performance measure calculated over 36, 60 and 120 months. The fund with the highest Lipper Leader for Consistent Return (Effective Return) value in each eligible classification wins the Lipper Fund Award. For more information, see lipperfundawards.com. Although Lipper makes reasonable efforts to ensure the accuracy and reliability of the data contained herein, the accuracy is not guaranteed by Lipper.

IMPORTANT MORNINGSTAR DISCLOSURES

Morningstar Rating™ as of 31 March 2026 for the Inst. series; other classes may have different performance characteristics. The River Canyon Total Return Bond Fund was rated against the following numbers of Multisector Bond funds over the following time periods: Overall 5 Stars (339 funds rated); 3 Yrs. 4 Stars (339 funds rated); 5 Yrs. 5 Stars (305 funds rated); 10 Yrs. 5 Stars (216 funds). Past performance is no guarantee of future results. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50%10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. © 2025 Morningstar.
